

Installing the FSLPS Projector Check "Competition"

At the beginning of an FSLPS Inter-Club PDI competition it is strongly recommended that you project some standard images as a way of checking the projector, and particularly to allow the judge to assess how common colours are rendered. A dummy competition is available called **FSLPS Projector Samples 1400 x 1050**. It can be downloaded from the FSLPS web site and imported into DiCentra as described below.

1. Using your web browser, go to the FSLPS web site at <http://www.fslps.org.uk>
2. Click on the [Competitions](#) link in the left hand column
3. In the section labelled **Host Resources**, you will see a line beginning *DiCentra Projector Samples Competition*. Click on the download option.
A file called **FSLPS Projector Download 1400 x 1050.zip** will be downloaded and you should save it on your desktop.
4. If necessary, copy this zip file to the desktop on the laptop you use to run competitions.

To import it on your competition machine:

1. **Right-click** on the zip file and select **Extract All..** from the context menu. **Extract** the folders and files from the zip file to the desktop. (On Windows 10 you may have to **Open** the zip file and then click on the **Extract** icon.) A folder called **FSLPS Projector Download 1400 x 1050** will appear on your desktop.
2. Start **DiCentra**. Click on **File > Import**
4. It will ask you to *Browse For Folder* and will show the folders on your desktop. Find the folder called *FSLPS Projector Download 1400 x 1050*. If you cannot see a folder called **Projector Test Import 1400 x 1050** underneath it, **click on the triangle** to the left of the *FSLPS Projector Download 1400 x 1050* folder.
5. **Select Projector Test Import 1400 x 1050** and then click on **OK**.
6. You should now see an import dialogue, showing **FSLPS Projector Samples 1400 x 1050** as the only competition. (If, instead, you see a *No Rules* dialogue **Cancel** the DiCentra dialogue and **go back to step 3** and try again.)
7. **Select Rules and Competition** and ensure that the *FSLPS Projector Samples 1400 x 1050* checkbox is checked. **Click Import**.
8. You will be told that files have been copied and should see the *FSLPS Projector Samples 1400 x 1050* "competition" in DiCentra's competition list.
9. You can now delete the *FSLPS Projector Download 1400 x 1050* folder and zip file from your desktop, if you like.

On the competition night:

1. **Start DiCentra**
2. If your projector has been calibrated and profiled (it should have been), **select** the correct projector profile in the **Profile selector** at the top right of DiCentra's main screen.
3. **Select** the **FSLPS Projector Samples 1400 x 1050** "competition" in DiCentra's **Competition selector**.

4. [Run the competition](#) in the usual way allowing the judge to inspect each image.
5. At the end, exit the test and select the evening's inter-club competition and run it in the usual way.
